

### Reflection-3

After we have learnt the core programming concepts, I'm really interested in designing computer games. In fact, I have been playing video games for approximately 12 years, and I have been dreaming that one day I can make my own game for a long time. However, I'm not sure that we are capable of making games from what we learnt in class since we are mostly making contact with graphs functions. Therefore, I hope we could have more concepts about game designing.

Moreover, since I'm a math and economics major student, I will also be happy to see that there are something relevant as my majors since we have been learnt some elementary operations of number and boolean.
