

Reflection-2

A1. I think the key to get full marks for the quizzes is to do the preparation question that Gary posted on the website. Review the notes that I make from the lecture is an important step before the preparation sheet. I usually do it on Tuesday, which is the day before the tutorial, and I think it is not that late to do it. ;“At least, it would be better than doing it on the tutorial and ask TA about all the questions :D” And I would hold any questions that I don’t understand and ask TA for help in the tutorial. For the upcoming test, I would review all the notes that I made from the lecture and questions from our tutorials. ;“Gary is the most handsome and kindest professor in the world and the questions in this test will not be hard? -> #true”

A2. Definitely, yes! I apologize for saying that images is boring in previous reflection. Once I made the pyramid of doge by using the simple function “beside”, it totally changed my opinion. The function is too long, so I will not include in this reflection. But I showed it to my friends, and they are all surprised by the magic of computer science.

A3. The thing that I initially found hard is “define” and I understand that by experiments. When I began to learn the function “define”, I thought it was kind of similar as “name”, but I was wrong. “Define” is more powerful than “name” and it is the core of the programming, and we use that to create our own function. I not sure about what will be the variables that contains in the bracket, and the form of the “define” function. And after I tried by myself, I understood this function and get to that point.

A4.I mainly ask questions in tutorial, and I’m totally fine with this method, and there is no trouble to do that. However, I’m not sure about other ways. There is no such a big trouble that I have to go to office hour or helping center from now on. I think there are enough ways that we can find a place to solve our problems. So, I’m appreciate that we can have those resources.

A5. I totally understand that TAs are very busy in the helping center, and I’m sincerely appreciate that the department takes our course seriously. I will also regard this course seriously, thanks for all the helps :D
